

ENT patient chairs & working stools

medseat type

Since 1983, **Heinemann Medizintechnik** is one of the leading equipment providers in **ENT medical technology**.

The company is not only a **manufacturer** of high-quality ENT treatment units, but also a **competent** partner for practice planning as well as your sales **partner** for complete ENT equipment in **hospitals** and private practices.

Patient chairs

Medseat, with its numerous variants, is the most popular treatment chair in ENT practices worldwide. It has won the trust of many practitioners through its ability to provide high flexibility and variability in a robust form that is easy to use. In addition, we have redesigned it over and over again throughout its product life. Today, in view of the growing scope of treatment in practices, the need for ergonomics for doctor and patient is also growing. It is about much more than just sitting upright, lying comfortably or maintaining a healthy posture for medical diagnosis and treatment. The focus is much more on the features of the treatment chair with an ergonomically movable fold-out step and flexible headrests. medseat is a compact all-rounder. It takes up little space and is suitable for examinations, advice and treatment, including surgical procedures.

In ENT practices, it is an integral part of many practice solutions. But it is also used in dentist, orthodontic or oral surgery practices as well as in plastic surgery.

More than ever, the new generation of the medseat accommodates your individuality in terms of treatment: Because now you can configure your treatment chair yourself combined with the head and footrest of your choice. For example, you can decide, tailor-made for your needs, whether you want a synchronized leg section with a guided Ergo fold-out step and the Ergo headrest, whether you need the Vario double joint with a secure hold, or whether you prefer to work with a foot switch or hand switch in the backrest.

The optional Quick Assist quick coupling for the head restraint, half or full spherical caps is a very ergonomic and efficient solution for frequent changes in reclining and positioning the patient. These variants only outline a selection of your options, in addition to the choice of colours and covers and a wide range of accessories. medseat is a classic that always stays current with new ideas.

Medseat Models	REF
Medseat 1.1 ENT patient chair, hydraulic (headrest and legrest not included, configurable at buyer's option - see accessories)	553-4612050

ENT-Mobile surgery chair

MULTILINE NEXT AC+

Outpatient surgery is the focus today. Flexibility, precision in timing and handling, mobility and safety determine the picture in clinics, operating centres, medical care centres and special practices. At the same time, it is about efficiency in the use of space and economy. In short: the patients should be precisely involved in the processes before, during and after the operation. In this modern form of hospital operations, bulky hospital beds make life unnecessarily difficult for the teams.

There is a demand for chairs that can accommodate patients in “green” with great flexibility and stability, transport them safely and comfortably to the operating room, be used as an operating table or allow ergonomic repositioning, and be used to move patients safely and comfortably to the recovery room after the operation. Exactly the job for GREINER MULTILINE NEXT AC+ and AC chairs.

The MULTILINE NEXT AC+ and AC exactly meet the requirements that are placed on mobile tables in and around the operating room today. For operations on the head, face and upper limbs, flexible solutions are required with the AC+ that can completely support patients before and during the operation. In the general operating room environment, on the other hand, the AC offers maximum comfort right into the operating room and for relaxation in the recovery room, with perfect support for ergonomic repositioning.

MULTILINE NEXT AC+

Together with surgeons and OR equipment specialists, GREINER medbest developed this innovative chair that will set standards in and around the OR.

The world in the operating theatre is changing – and with it, the tables are changing. The implementation of integrated OR workflows defines the need for ergonomic all-round solutions that are fully mobile and do not require the patient to be repositioned. The MULTILINE NEXT AC+ corresponds exactly to this profile – with a short back section, stable patient placing and positioning, standard bars all around and intelligent and quickly exchangeable headrests. Powerful motors, supplied by a powerful battery, support the work of the OR teams. Ergonomic access around the patient's upper body is provided, the ergonomic headrest provides a secure support. The intelligent headrest system enables flexible adaptation to every need.

Hygiene

Compliance with the strictest guidelines, perfect access, clean surface finish, tested surfaces, minimum number of seams

Choice of headrests

Ergo, without/with Vario double joint, Quick assist quick coupling, interchangeable upholstery as well as full and half spherical caps for Quick assist

Sitting and lying comfort

Comfortable, 60 cm wide cushion cover for patients of height and weight up to 220 kg

Ergonomics

Gap-free, flush padding as well as fixable and retractable armrests for direct access and easy rearrangement

Minimal space

requirements Real chair position with 90° inclination of the leg section, can be boarded at a height of 58 cm

Mobility

12.5 cm swivel castors for comfortable travel, central braking system

Leading the way

One wheel adjustable for perfect mobility when running straight ahead

- Mobile OR table with short back section and stability reinforcement in the back for stable and comfortable patient positioning
- Can be used flexibly for minimally invasive procedures in plastic, dermatological surgery, maxillofacial surgery, ENT, ophthalmology, as well as many other specialist disciplines
- Equipped with 4 motors, stainless steel standard bar at the top, Ergo headrest with Vario double joint, and central locking system for the double swivel castors
- Versatile accessories suitable for operating rooms: All-round stainless steel standard bars for docking clinical accessories, electrically conductive covers, replacement battery with wall charging station, arm-hand surgery table and Goepel leg holder.
- Electromotive adjustment of back, seat and leg sections as well as height lift, emergency footswitch for the Trendelenburg position

Working chairs

The variety of the GREINER work stools programme is as versatile as the working life in the medical field. Well known for their „Made in Germany“ experience, the stools have been supporting the work of medical professionals 24/7 around the world for years. The range of applications extends from examination and treatment up to the operating room. Both because of their strengths in anatomy, ergonomics, and functionality and because of accommodating GREINER medical chairs for specialist applications. In other words: day after day, GREINER helps to make the everyday work of healthcare better, easier, and healthier. Good seating in the best quality which facilitates processes while strengthening the back.

With innovative features, GREINER has always managed to show that there is a difference in work stools. This includes the fulfilment of hygienic and technical requirements for treatment as well as the varied selection of heights for sitting and upholstery, height adjustment with a 360° manual ring or foot release of the gas spring as well as the choice of base part and castors. Work stools and chairs of high-class quality that retain a long working life are produced at the in-house facilities including a foaming and sewing department. The cover in premium material is extremely comfortable, which noticeably improves the sitting comfort. Of course, all work stools meet the clinical requirements for stability, safety and hygiene, while sustainability in production and permanent spare parts supply are guaranteed.
